ENFORCER® has been developed with the end-user in mind. User-friendliness and consistency highlights the RMS data entry process.

Not only is the data entry process enriched with features, it has also been designed to meet data integrity issues by featuring Master Address Tables, Master ID Tables, and Master Property Tables, in addition to supporting Address/Location validation for consistency.

Our APSS Gateway™ allows ENFORCER™ to run from any workstation on the in-house network or in real-time from in the vehicle with TCP/IP support (Wireless), while at the same time supporting a distributed data sharing feature.
