

ENFORCER™ - Property & Case Management

Product Highlights:

Property Management:

- Multi Property Container assignment
- Bar code scanning and label printing support
- Features a Property Intake Module, eliminating the need to create an incident prior to entering property associated to the incident in RMS. Also allows full import support once the incident report is entered.
- Full Batch Processing—BY scanning each item, a queue is created for a one time destruction or other type of disposal
- Inventory checks and balances process support
- Full Chain of Custody support for a single item or multiple items
- Form Letter generation streamlining Microsoft Word for User defined form letters
- File Attachments (Photos , Streaming Video, Images, etc.)
- Electronic signature support

ENFORCER™ features a fully functional Property/Evidence Management system that has the ability to process all property tasks from inception to batch process elimination whether it is being destroyed, or being returned to the owner. Bar coding support streamlines the process from beginning to end, as well as form letter generation.

ENFORCER™ features a full Case Management module allowing investigators assignment, solvability factoring, time and cost management, among many of the data tracking necessary for solving open cases. Messaging allows communications from supervisors to investigators and vice-versa for reviews, case status and approvals by lead investigators or supervisors. Scheduled reminders assist in appointment scheduling for follow-ups on cases under investigation.

Case Management:

- Assignment of officer to a case incident
- The ability to create a message along with assignment and require a response from the recipient
- Full investigator access to case reports with security enabled privileges
- Time and cost management per case or batch cases for budgeting purposes
- Case investigation based on solvability factors
- Full document, scanned images/ attachments, handwritten statements
- Detailed Management Reports
